RE: REFERRAL FOR HOSPICE EVALUATION - Thompson, Hanna (DOB 04/11/1967) Pt

Acct: SYN152

DIAGNOSIS: Stage IV Lung Adenocarcinoma (KRAS G12C+), Terminal Stage. ICD-10: C34.91

SUMMARY: Ms. Thompson is a 56 y/o F diagnosed 10/20/2022 with Stage IV Lung Adeno (mets to contralateral lung, bilateral adrenals). KRAS G12C+, PDL1 <1%.

- **1L Tx:** Carbo/Pem/Pembro (11/11/2022 – Sept 2023). Progression on 09/09/2023 in adrenals, lungs, new liver mets.
- **2L Tx:** Sotorasib 960mg QD (Sept 2023 – Nov 2023). Minimal response, rapid progression noted on scans last week (further growth liver/adrenal mets, worsening pulm nodules). ECOG declined rapidly from 1 to 3-4 over past month.
- **Current Status:** Severe fatigue (bed-bound >75% day), cachexia, anorexia, intermittent confusion, moderate dyspnea at rest (requires home O2 3L). Pain currently controlled with low-dose morphine elixir PRN.

PROGNOSIS: Poor, estimated weeks. Patient understands terminal nature, desires comfort care focus. Declines further anti-cancer Rx. Meets hospice criteria (terminal dx, ECOG 4, rapid decline post-therapy).

REQUEST: Please evaluate for routine home hospice admission for comprehensive symptom management and end-of-life care. Patient lives with supportive daughter. DNR status discussed and desired (awaiting form completion). Relevant records faxed separately. Please contact my office with any questions.

(Signed electronically) Vivian Wells, MD

Follow up: Patient died on November 12, 2023
