=====

TEAM Oncology: Dr. Sarah Blake Radiation Oncology: Dr. Jason Taylor Neurosurgery: Dr. Miguel Reyes Palliative Care: Dr. Grace Wu

DIAGNOSIS • Leptomeningeal disease progression in RET fusion+ NSCLC • Status post whole brain radiation (completed during admission) • Cognitive impairment secondary to CNS disease and treatment • Chronic seizure disorder on levetiracetam

ONCOLOGIC SUMMARY 71yo man with RET fusion+ NSCLC met to contralateral lung, diagnosed 1/21/2021, received seliparitinib since 2/12/2021 with excellent response. Disease progression beginning of 07/2022 with new brain metastases. Switched to cabozantinib+vandetanib clinical trial with initial response. Recent onset confusion, headache, memory issues prompted admission. MRI brain/spine revealed extensive leptomeningeal disease. CSF positive for malignant cells.

HOSPITAL COURSE SUMMARY • Completed WBRT (30Gy/10 fractions) • Discontinued from clinical trial due to progression • Trialed pralsetinib with modest benefit • VP shunt placed for hydrocephalus • Multiple family meetings for goals of care • Advanced directive completed • Home hospice arranged
