

HOSPICE REFERRAL LETTER

CITY GENERAL HOSPITAL Hematology Service

October 28, 2022

Comfort Care Hospice Services Attn: Intake Coordinator

RE: Robert Miller DOB: 04/02/1946 (AML009) Diagnosis: Refractory AML, Adverse Risk

This 76-year-old gentleman with multiply relapsed AML is being referred for home hospice services.

ONCOLOGIC HISTORY: Mr. Miller presented March 2022 with fatigue and pancytopenia. BM biopsy on 03/19/22 confirmed AML with 67% blasts, complex karyotype, RUNX1 and TP53 mutations (ELN adverse risk). Given age and comorbid COPD (60 pack-year history), he was started on single-agent azacitidine 75mg/m² x7 days on 03/28/22.

Initial response assessment after 2 cycles showed stable disease with persistent 35% blasts. Cycle 4 complicated by neutropenic fever requiring 10-day admission. Restaging after cycle 5 (end of September 2022) showed progressive disease with 78% marrow blasts, worsening anemia (Hgb 6.8), and thrombocytopenia (plt 18K).

CURRENT STATUS: ECOG 3, spending >50% time in bed. Requiring biweekly transfusions. Declined further therapy including clinical trials. Wife is primary caregiver, adult children involved.

MEDICATIONS:

- Levofloxacin 500mg daily (prophylaxis)
- Acyclovir 400mg BID
- Pantoprazole 40mg daily
- Albuterol MDI PRN
- Morphine 15mg PO q4h PRN

CODE STATUS: DNR/DNI

Please expedite evaluation. Family aware of poor prognosis (weeks).

James Morrison, MD Attending Hematologist Direct: 555-7823

[Follow-up note dated 11/02/2022: Patient expired at home 10/31/2022 per hospice notification]
