

HOSPICE DISCHARGE SUMMARY

St. Mary's medical center

Date: August 14, 2022

RE: Patricia Thomas (DOB: 10/16/1948), MRN: AML012

FINAL DISCHARGE SUMMARY - PATIENT EXPIRED

Mrs. Thomas, a 73-year-old woman with refractory AML with complex karyotype, was admitted 08/10/22 with altered mental status and respiratory distress. She expired peacefully on 08/13/22 at 22:15 with family present.

FINAL HOSPITAL COURSE:

Admitted from clinic with confusion, O2 sat 84% on RA. CXR showed bilateral infiltrates consistent with leukemic infiltration vs PCP vs fungal pneumonia. WBC 124K with 89% blasts (up from 45K one week prior).

Given disease progression on venetoclax/azacitidine (started 02/15/22 a week after diagnosis, progressed mid July 22), goals of care discussion held with patient's daughter (HCP). Family understood grave prognosis with no further anti-leukemic options given complex karyotype (-5, -7, +8, multiple additional abnormalities) and poor performance status.

Transitioned to comfort care 08/11/22. Managed with morphine gtt for dyspnea, haloperidol for agitation. Peaceful death on 08/13/22.

CAUSE OF DEATH: Respiratory failure secondary to leukemic infiltration in setting of refractory AML

Thomas Mitchell, MD
