

PATIENT AML025

Hem/Onc Clinic 03/04/2024

S: Kevin Allen (born 03/15/1982) with favorable-risk AML (NPM1+/FLT3-neg). Feels "pretty good." Mild fatigue, no fever/bleeding. Counts recovering. Back to remote work 3 days/week as graphic designer. "When can I start traveling again?"

O:

AML Dx 10/01/2023 – CPX-351 Induction I started on 10/08/2023

VS: 98.4, 78, 120/72

Gen: WDN male, no distress

HEENT: No bleeding

CV/Pulm: Normal

Abd: Benign

Skin: Resolving drug rash from CPX (trunk)

Labs (today):

- WBC 3.8 (ANC 2100, recovering)
- Hgb 9.8
- Plt 167K
- Comprehensive panel normal
- NPM1 transcript level: undetectable (was 3.2×10^4 at dx)

A:

1. NPM1+ AML - excellent response to CPX-351 induction + 3 cycles consolidation
2. MRD negative by molecular monitoring

P:

1. May travel domestically after final cycle if counts stable
2. Continue acyclovir, fluconazole prophylaxis
3. NPM1 monitoring q3 months x2 years

Return 4 weeks.
