

COMPREHENSIVE CANCER CENTER Leukemia Survivorship Program

February 8, 2024

Dear Dr. Jennifer Martinez,

I'm pleased to provide this survivorship summary for Mary Young (DOB: 07/09/1956, MRN: AML026).

INITIAL DIAGNOSIS AND TREATMENT (October 2021):

Mrs. Young, then 65, presented in mid October 2021 with fatigue and bruising. Workup revealed AML with normal cytogenetics, DNMT3A (R882H) and IDH2 (R172K) co-mutations, classified as intermediate risk.

She received standard 7+3 induction on 10/20/21, achieving CR by day 30 (marrow: 2% blasts, MRD 0.02%). Given her excellent functional status and intermediate risk, she received alloSCT (10/10 MUD) on 12/15/2021. Since then 100% chimerism and negative for IDH2 mutation.

POST-TREATMENT COURSE:

12-month assessment (12/2022):

- Morphologic CR maintained
- MRD negative by flow cytometry and NGS
- Normal cytogenetics
- Chimerism 100%
- Both DNMT3A and IDH2 mutations undetectable

SURVEILLANCE AND CURRENT STATUS:

Recent Evaluation (01/30/24):

- Physical exam: Normal, ECOG 0
- CBC: WBC 5.2K, Hgb 13.1, Plt 195K (all normal)
- Bone marrow (01/15/24): Normal trilineage hematopoiesis, no evidence of AML
- MRD: Negative by flow and molecular testing
- No signs for GvHD
- All vaccinations received

Quality of Life:

- Returned to full-time work as school administrator

- Completed half-marathon in November 2023
- No significant late effects from chemotherapy
- Mild peripheral neuropathy (resolved)
- No secondary malignancies

HEALTH MAINTENANCE:

Please continue routine care including:

- Mammogram (due this year)
- Colonoscopy (completed 2023)
- Bone density monitoring
- Standard vaccinations (completed re-immunization post-chemo)
- Cardiovascular risk management

GENETIC COUNSELING:

Given IDH2/DNMT3A mutations, discussed that these are acquired (somatic) mutations, not hereditary. No increased risk for family members.

Thank you for your partnership in Mary's care. Her excellent outcome exemplifies the improving prognosis for selected intermediate-risk AML patients. Please don't hesitate to contact our survivorship clinic at 555-2234 with any questions.

Warm regards,

Elizabeth Chen, MD, MPH
