

SECURE PATIENT MESSAGE

From: Dr. Emily Thompson
To: Kimberly Phillips (DOB 18.07.62) MRN AML040)
Date: March 2, 2024
Subject: Great news from your recent tests!

Hi Kim,

I have wonderful news from your bone marrow biopsy!

The results show you remain in COMPLETE REMISSION - no signs of leukemia! It's now been a full year since you started treatment, and you're doing beautifully.

Specifically:

- No leukemia cells seen (0% blasts - normal is less than 5%)
- Your NPM1 mutation: NOT DETECTED ✓
- Your IDH1 mutation: NOT DETECTED ✓
- Blood counts recovering nicely

This is exactly what we hoped to see after your 4 consolidation cycles.

What's next:

- Continue monthly blood work
- Next bone marrow check in 6 months (September)
- You can increase your activities as tolerated
- That Europe trip you asked about? Book it! Just avoid June/July when you need labs.

Remember: You had "favorable risk" AML with NPM1 and IDH1 mutations. This combination typically responds very well to chemotherapy (7+3 and HiDAC). Remember, your diagnosis was on 27nd Feb 2023 and we started therapy 4 days later – at 1 year in remission, your chance of cure is approximately 70%!

I know this year has been incredibly tough (especially losing your hair right before your daughter's wedding!), but you've shown amazing strength. Your positive attitude absolutely contributed to this great outcome.

Questions? Call me directly at 555-1234. Otherwise, see you at your next appointment March 29th.

Celebrating with you!

Dr. Thompson

P.S. - Your hair looks fantastic now - even better than before!
