

## **VIRTUAL VISIT DOCUMENTATION**

**Platform:** MyChart Video Visit

**Date:** March 5, 2024

**Time:** 14:30-14:45

**Patient:** Ruth Mitchell

**MRN:** AML043

**DOB:** 01/01/1973

**Location:** Patient's home, Denver, CO

**Visit Type:** Routine follow-up, Cycle 3 Day 21

### **VIRTUAL ASSESSMENT:**

51-year-old female with IDH1-mutated AML diagnosed 12/4/23 after routine physical showed pancytopenia. On venetoclax 400mg + ivosidenib 500mg daily since 12/8/23.

### **Via Video Today:**

- Appears well, good color, speaking in full sentences
- No visible rash or jaundice
- Patient showed me her pill bottles - confirms compliance
- Husband present, both engaged in discussion

### **Patient Reports:**

- Energy improving, "about 70% of normal"
- No fevers (keeps temperature log)
- Mild constipation managed with Miralax
- Some food aversion but maintaining weight (142 lbs today via home scale)
- Fingerstick glucose checks BID: 110-145 (ivosidenib can cause hyperglycemia)

### **Labs (drawn locally yesterday):**

- WBC 2.1 (ANC 980)
- Hgb 9.4 (last transfusion 2 weeks ago)
- Plt 67K
- IDH1 mutation VAF decreased: 38% → 12% → 4.2% (approaching MRD)
- Chemistry panel stable

### **PLAN:**

- Continue current doses of ven/ivo until allogeneic stem cell transplant from 10/10 MRD (planned early April 2024 pending donor availability)
- Bone marrow biopsy scheduled 03/19/24 to assess CR
- Local lab draws weekly
- Next video visit in 3 weeks
- Call if fever  $>100.4^{\circ}\text{F}$  or other concerns

**E-prescribed:** Ondansetron 4mg PRN for mild nausea
