CENTER

Patient: Amanda Reed
DOB: 06.10.1951
Date of Death: 24.01.2023
Medical Record #: AML058

Dear Dr. Johnson,

I am writing to formally notify you of the death of Mrs. Amanda Reed, our shared patient with acute myeloid leukemia. Mrs. Reed passed away on January 24th, 2023, at 11:47 PM in our palliative care unit.

Mrs. Reed was a 71-year-old female initially diagnosed with AML on August 15th, 2022, following presentation with progressive fatigue, bruising, and pancytopenia. Bone marrow biopsy revealed 67% blasts with monosomal karyotype (-5, -7, +8), conferring adverse-risk disease per ELN 2022 criteria. Additional molecular studies showed TP53 mutation (VAF 42%), DNMT3A R882H (VAF 38%), and TET2 frameshift mutation.

Given her age and comorbidities (diabetes mellitus type 2, chronic kidney disease stage 3, prior myocardial infarction), she was deemed unfit for intensive chemotherapy. Treatment commenced with azacitidine 75mg/m² subcutaneously days 1-7 of 28-day cycles on August 24th, 2022. Initial supportive care included allopurinol, levofloxacin prophylaxis, and fluconazole.

Mrs. Reed completed two cycles with minimal toxicity. However, bone marrow evaluation after cycle 2 (October 2022) showed persistent disease with 45% blasts and no morphologic response. By early November 2022, she developed progressive disease with rising blast count (78% peripheral blasts), worsening cytopenias (Hgb 6.2 g/dL, platelets 12,000), and constitutional symptoms.

Palliative care consultation was initiated in December 2022. Mrs. Reed elected for comfort-focused care, declining further anti-leukemic therapy. She was supported with transfusions, antibiotics for recurrent infections, and symptom management. Her final weeks were complicated by pneumonia, bleeding secondary to thrombocytopenia, and gradual decline.

Cause of death was acute myeloid leukemia with complications of pneumonia and hemorrhage. Her family was present at the time of death. Autopsy was declined by the family.

Please extend my condolences to any mutual acquaintances. Mrs. Reed was a dignified patient who faced her illness with remarkable courage.

Sincerely,
Dr. Sarah
